Outline

• Eurofound
• Background and context
• Working time and WLB in a life course perspective
• Working time patterns and work-life balance
• Policy implications
Established in 1975 - based in Dublin

Budget of approx. €20 million

Approx. 100 staff members

Tripartite agency
Background and context I

- Treaty of Rome 1957 – Equal pay for equal work

- Since, **significant progress has been made**: increased number of women in the LM and their progress in achieving better education and training.

- However, **gender gaps remain**:
  - Women overrepresented in lower paid sectors jobs
  - Women underrepresented in decision-making positions.
  - [very] Low take up rates of paternity and parental leave by fathers.
  - Uneven/unequal distribution of work (paid and unpaid) between men and women.
Background and context II

✓ 2015 European Commission roadmap New start to address the challenges of work–life balance faced by working families + consultations

✓ 2015 EC Strategic engagement for gender equality 2016-2019
  1. Increasing female labour market participation and equal economic independence;
  2. Reducing the gender pay, earnings and pension gaps and thus fighting poverty among women;
  3. Promoting equality between women and men in decision-making;
  4. ...

09 Work-life balance

“Parents and people with caring responsibilities have the right to suitable leave, flexible working arrangements and access to care services. Women and men shall have equal access to special leaves of absence in order to fulfil their caring responsibilities and be encouraged to use them in a balanced way.”

11 Childcare and support to children

“a. Children have the right to affordable early childhood education and care of good quality.”

European Pillar of Social Rights, 17 November 2017

Working time patterns and work-life balance I

The vast majority of workers in the EU stated that their working hours fit well or very well with their private life obligations;

However… men appear to be less satisfied with their work–life balance than women:

- H1 - men have longer working hours and relatively more difficulties adapting working time to family life or other social commitments whereas women adapted their working time to their (family) needs

- H2 - gender labour market segregation and gender division of unpaid work: many women, anticipating their role as the main care providers in the domestic sphere, may chose occupations, sectors and branches of activity that are known to make it easier to combine work with family commitments.
Working time patterns and work-life balance II

- Life course impact: negative impact during the **early parenting phase**.

- **Long working hours** are **negatively** associated with WLB.

- Working time arrangements that favour **fixed and regular working hours** are positively associated with WLB.

- High **predictability of working time** and/or **job autonomy** also increase the likelihood of workers’ reporting a more balanced work-life situation.
Policy implications

• Room for improvement: mixed policies/legislation across the EU and evidence that working parents want change.

• Working time arrangements avoiding long hours and favouring fixed, regular and predictable working hours are more likely to have a positive impact on WLB.

• Workplace is crucial level.

• Early parenting phase of life is crucial in terms of WLB.

• Emphasis on encouraging men.

• ‘Transformative’ policies – better distribution of work.
